

Project Management

Project Management that gets the job done.

At Knowledge Solutions, we take pride in having a staff of **experienced project management professionals** who have worked in a variety of industries, over many years, managing all types of projects. These experienced professionals are ready and willing to help you solve your project issues using tools and processes that can be applied to your real world problems.

Knowledge Solutions can help you **plan, schedule, control and manage** your projects with our proven set of project management tools and methodology. We can establish and manage a process that meets your specific needs, and which is designed to support your entire organization. Our tools will ensure that information flows to the staff and customers who need it, that you have a flexible set of reports to track status, and that all work flows through the designated approval processes. Once we have established the process and trained your staff in its use, we can either continue to manage it or transfer knowledge to your employees.

One of the key tools that Knowledge Solutions uses in our project management is our Quality Development Framework (**QDF**), designed and implemented specifically to the International Standard for Quality Management (ISO 9000:2000) specifications.

Resources and expertise you need for successful implementation.

At Knowledge Solutions, we can provide resources that serve as an extension of your staff, supporting the needs of your organization in the areas of:

- Project management consulting
- Project office establishment and support
- Project management technology integration
- Project portfolio management
- Project management best practices, continuous improvement

Our experienced project management resources and solutions can help cost-effectively address your needs in industries including:

- Communications
- Financial Services
- Healthcare / Life Sciences
- Insurance
- Publishing
- Retail
