

Are your Lawson Applications ready to take on the world?

The global economy of today propels your business to meet the fast moving changes of the different world markets. Translating your base currency in an integrated fashion into the many foreign exchange rates will help you stay ahead of the curve. Knowledge Solutions has successfully supported its client global requirements by providing proven business and financial practices required to enter the global market.

Knowledge Solutions can help you configure and deploy your Lawson Applications globally with multi-company and multi-currency capabilities.

Understanding the set up complexities of the multi-currency ledgers can be a challenging project for the unprepared. We at Knowledge Solutions see those challenges as the opportunity to enhance your General Ledger with the multi-currency features of Lawson Financials. By reducing your company's exposure to the fluid currency markets, an integrated multi-currency ledger provides updated tracking on a monthly, weekly or daily basis.

Our business solutions for your international multi-currency needs include:

- Determine best practices to match your multi-currency needs
- Providing blue-print mapping of foreign exchange design
- Define how Lawson's Currency module works within the general ledger
- Define how Lawson's Currencies performs with sub-ledgers (i.e. accounts payable, accounts receivable and asset management)
- Develop translation strategies that fit your month/year end requirements
- Report by company in two report which are independent of your base recording
- Record transactions in base or foreign currency
- International Reporting Capabilities
- Integrate budget design with multi-currencies
