

Gain Momentum with Lawson System Foundation 9.0 (LSF9) Security

Knowledge Solutions specializes in translating your LAUA Security Model into a new 9.0 Role Based Security Model by leveraging our proven quick review, analysis and build strategies.

One of best new features of the Lawson System Foundation (LSF9) technology platform is the new security administration application, Lawson Security 9. This new version offers many improvements and compliances as compared to the LAUA security model.

Knowledge Solutions can help you unlock all unknowns about LSF9 Security and create a simple approach to implementing your new security model.

Key Disciplines include:

- Security Migration Analysis Services – LAUA to LSF9
- Role Based Security Design, Development and Testing
- Proof of Concept Workshops
- Enhanced and Custom Security Reports
- Business Reviews to meet Audit compliance requirements
- Development of Security Policies and Segregation of duties

Our Implementation Approach:

Planning: LSF9 Security requires a significant degree of analysis, planning, and testing. We develop a comprehensive project plan to insure success.

Design: Up front time is required to insure a good design. A good design reduces on-going administration efforts.

Phased Approach: Our strategy is to launch a pilot project followed by a phased implementation.

Rollout: Lawson 9.0 Security can be implemented by user so you can change from LAUA to 9.0 easily.

Training: A knowledge transfer plan is part of every implementation to insure that the system administrators have the background to provide day-to-day support.
